

CEREC

Say Goodbye to Silver Fillings

Technology today is changing our everyday lives, but did you also know that it's also changing and improving dentistry! Cutting-edge innovations in dental instruments are requiring less time in the dental chair, yet creating satisfying results.

One breakthrough instrument that we use in this office is called CEREC (Chairside Economical Restoration of Esthetic Ceramics). What that means to you is we can now quickly restore your damaged teeth with natural-colored ceramic fillings, saving you time and inconvenience. In most cases, we can restore damaged teeth in a single appointment!

CEREC uses CAD/CAM technology to design and mill tooth restorations such as veneers and partial and full crowns, and all other single-tooth restorations. The restorations are

made from high-quality, biocompatible, anti-abrasive and plaque-resistant ceramic material that can be matched to the color of your own teeth!

Ask us how you can benefit from this new technology today! 336-774-2477
